Use the Proper Techniques for the Foundation of a Long Lasting Bond

CRUCIAL STEP IN ASSEMBLY

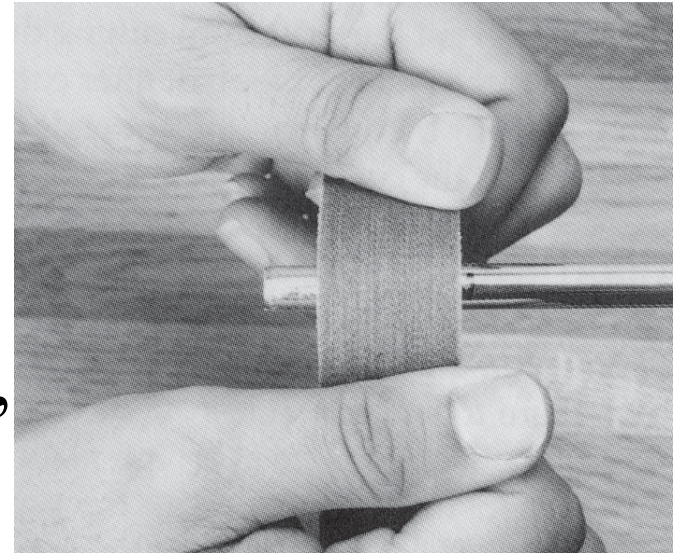

Steel versus Graphite

Manual versus Motorized

You Chose Amongst the Following Methods for Abrading the Shaft

Hand Sanding

- Low cost
- Manual, time consuming
- Recommended for graphite, but can be used for steel shafts too
- 80-grit for steel and 120 or 150-grit for graphite / composite shafts

Hand Filing

- Low cost
- Manual, time consuming
- Recommended for steel shafts only!

Scraping with Knife Blade

- Low cost
- Manual, time consuming
- Recommended for graphite shafts only!
- Use extra precaution to ensure the proper amount of abrasion without damaging shaft

Scraping with Knife Blade

- Low cost
- Manual, time consuming
- Recommended for graphite shafts only!
- Use extra precaution to ensure the proper amount of abrasion without damaging shaft

Motors, Arbors and Hand Drills

- Less \$\$\$ than belt sanders
- Faster than by hand

- Recommended for graphite shafts, can be used for steel shafts with proper grit / pressure

Tips and Techniques

- Sand the post on over-the-hosel assemblies
- Don't over-abrade graphite & very lightweight steel shaft to avoid pre-mature breakage
- Re-bore the hosel to accept a graphite shaft on the plus side of the tolerance - DO NOT sand more otherwise increases chance shaft will fail
